

Course ID: HBOII2	Course name: BI	urse name: BIOCHEMISTRY WITH CLINICAL CORRELATIONS				
Cycle: SECOND	Year: FIRST	Semester: I	ECTS credits: 6			
Course status: ELECT	'IVE	<b>Total course hours: 90</b> Lectures: 45 Laboratory: 45				
Teaching participant	ts: Teachers an biochemistry	Teachers and associates with expertise in the field of biochemistry and clinical biochemistry				
Prerequisite for enrollment:	-					
Course aims:	Acquaintance specific clinio monitoring an various organ	Acquaintance of students with the meaning of general and specific clinical-biochemical tests in prevention, diagnosis, monitoring and prognosis, as well as the success of treatment of various organs and organ systems.				
Thematic course uni	1.Sodium concentr renal a potassiu kidney electroly concentr2.Hypotha system. dysfunct3.Thyroid 4.4.Calcium calcium5.Hormon 6.6.Hormon a) Activatio b)7.Patobioo 8.8.Carbohy other su 9.9.Lipids an 10.10.Absorpt pancrea11.Liver dis 12.12.Enzyme 13.13.Proteins 14.14.Clinical 15.15.Purine a 16.16.Iron met 17.17.Porphyr 18.18.Biochem	<ol> <li>Sodium and water metabolism. Clinical meaning of sodium concentration in plasma. Potassium metabolism. Measurement of renal and gastrointestinal potassium loss. Clinical picture of potassium metabolism disorders. Biochemical investigations of kidney function disorders, and homeostasis of water and electrolytes. Disorders of acid-base balance. Blood gas concentration.</li> <li>Hypothalamus and pituitary gland. Adrenal cortex. Reproduction system. Investigation of pituitary, adrenal and sex (gonadal) gland dysfunction.</li> <li>Thyroid function.</li> <li>Calcium, phosphate and magnesium metabolism. Examination of calcium metabolism disorders.</li> <li>Hormonal regulation of metabolism.</li> <li>Hormonal regulation of gene activity.</li> <li>Patobiochemistry and meaning in diagnostics.</li> <li>Carbohydrate metabolism and its relationships to the metabolism of other substances.</li> <li>Lipids and lipoproteins in plasma.</li> <li>Absorption in the digestive tract: function of the stomach and pancreas.</li> <li>Liver diseases and gallstones.</li> <li>Enzymes. Enzyme pathobiochemistry and significance in diagnostics.</li> <li>Proteins in plasma and urine.</li> <li>Clinical chemistry of the newborn.</li> <li>Purine and urate metabolism.</li> <li>Iron metabolism. Examination of iron metabolism disorders.</li> <li>Porphyry.</li> <li>Biochemical effects of tumors.</li> </ol>				

UNIVERSITY	OF SARAJE	/0 –	FACULTY	OF	SCIENCE
	Department	of C	hemistry		

	19. Cerebrospinal fluid (CSF). 20. Control of drug concentration.					
Learning outcomes:	of concentrations of minerals, hormones, vitamins, lipids and lipoproteins, enzymes and other proteins, carbohydrates and other biomolecules in blood plasma and/or other body fluids Also, they will gain knowledge about the causes and consequences of acid-base balance, about the mechanism o action of the three-member axis pituitary-hypothalamus- adrenal cortex, about the function of the thyroid, stomach pancreas, and liver. The student will learn about the clinica chemistry of the newborn, and about the biochemical effects o tumor. <i>Skills:</i> The student will be able to understand the clinica meaning of concentrations of minerals, hormones, vitamins lipids and lipoproteins, enzymes and other proteins carbohydrates and other biomolecules in blood plasma and/or other body fluids. Also, they will acquire skills on recognizing the causes and consequences of acid-base balance, on the relationship between the action of the three-member axis pituitary-hypothalamus-adrenal cortex and work of vital organs and tissues. <i>Competences:</i> The student will have the competence to independently judge the clinical importance of water and electrolytes balance, acid-base balance, to discuss the mutua influence of concentrations of minerals, hormones, vitamins lipids and lipoproteins, enzymes and other proteins carbohydrates and other biomolecules in blood plasma of functioning pituitary-hypothalamus-adrenal gland system. Also the student will be competent to present the function of the kidney, thyroid, stomach, pancreas, liver, and other organs in the context of maintaining the normal homeostasis of the entire organism.					
Teaching methodology:	Classroom lectures and laboratory exercises.					
Assessment methods and grading system <sup>1</sup> :	Grading criteriaCriteriaMaximal scoreRequired score1.Class attendance532.Class activities1053.Midterms45254.Final exam4022Total100					
	Scores and grading       Score     Grade					

 $<sup>^1</sup>$  The grading structure for each subject is determined by the Council of the organizational unit before the beginning of the academic year in which the subject is taught as per Article 64, paragraph 6 of the Law on Higher Education of Sarajevo Canton

Form SP2
